INTRODUCTION

I was 14 when I first sat in front of an Olivetti M19 and realized a few lines of code could make things happen. That moment sparked a curiosity that never left me.
Today, I lead technical teams in Sky's editorial area, where technology serves one clear purpose: enabling creativity.
I've helped drive the shift towards a DevOps culture and testing automation, with a strong focus on efficiency and quality.
I'm passionate about automation and building solid infrastructure, working daily with AWS and GCP.
I also keep a close eye on the latest developments in machine learning and large language models.
My goal? Build smart systems that remove friction and give back freedom.
Let technology handle the heavy lifting so people can do the meaningful work.

EXPERIENCE

Sky Italia, *Platform Engineering Coordinator and AI Lead*

JAN 2022 - PRESENT

I lead two **Platform Engineering** teams focused on enabling editorial and video teams through scalable, reliable, and self-service internal platforms. Defined the long-term technical vision and architecture strategy, adopting a Platform as a Product approach enhanced by AI technologies including LLMs, conversational bots, and multi-cloud platforms to elevate Developer Experience organization-wide.

I designed and helped operate the **voting platform for XFactor**, scaling it to support traffic peaks of 75,000 requests per second, leveraging SRE principles to ensure performance, resilience, and observability. I drive the adoption of test automation frameworks, setting cross-team standards and best practices to improve software quality and reduce time-to-release. I started with all manual tests and now we run more than one hundred automated tests each sprint.

I designed and implemented a **Disaster Recovery (DR)** system enabling full reconstruction of Sky's multi-cloud infrastructure (AWS and GCP) across all channels from a single VM in under 2 hours.

I am an AI Lead and Software Engineering Manager leading two Agile teams and driving the AI roadmap. I specialize in designing and delivering production-ready solutions based on LLMs, Generative AI, and Agentic AI, with hands-on experience in Google ADK and agent-based architectures.

I'm a dedicated Python Developer with a strong focus on building scalable

applications and streamlining workflows.

Beyond coding, I am a proactive tech evangelist, organizing internal AI Tech Days and hosting recurring Test Automation meetups (focus on Selenium as Browerstack community builder) to drive innovation and technical excellence within the team.

Sorint.LAB, *Linux Sysadmin, Devops Consultant*

2017 - 2022

I worked as a DevOps consultant and Red Hat system administrator at two of Italy's largest banking institutions. Managed and optimized mission-critical infrastructures in a RedHat Partner environment, ensuring high availability for financial services. Administered different server landscapes including RedHat Enterprise Linux (RHEL) and Windows Server. Implemented and orchestrated containerized applications using Kubernetes and Docker Swarm. Managed enterprise-level databases including Oracle and MsSQL, ensuring performance and data integrity. Supervised virtualized environments leveraging VMware for infrastructure scaling and maintenance.

SET Sviluppo, *Systems & Network Engineer | Industrial Automation & Tracking Solutions*

2007 - 2017

Production Tracking Systems: Developed a comprehensive end-to-end tracking system for pipe production, monitoring the entire lifecycle from manufacturing to shipping. This solution significantly improved production data accuracy, providing a competitive advantage in global markets including Italy, Romania, Saudi Arabia, and Kazakhstan. Virtualization & Simulation: Proactively designed and implemented a virtual testing environment using VMware and Proxmox. Integrated Siemens PLCSIM with open-source tools to simulate industrial plant operations, drastically reducing testing time and hardware dependency. Industrial Networking & Security: Pioneered the implementation of secure, dedicated Wi-Fi networks (Cisco & Siemens) for on-site commissioning, enabling programmers to access PLCs safely during field testing. Infrastructure Monitoring & Documentation: Audited and documented the complex network architecture of the Dalmine plant. Deployed enterprise monitoring solutions using Nagios and Cacti for thousands of network devices (Cisco) and servers, including the implementation of network-wide time synchronization via NTP. Network Optimization: Resolved critical network issues, including loops and configuration inconsistencies, by utilizing both industry-standard diagnostics and custom-developed tools. Commissioning & Startup: Led on-site commissioning and startup phases for various production lines (e.g., rolling mills, finishing lines), coordinating effectively with stakeholders and clients to ensure project success. Compliance & Safety: Served as the key reference point for safety documentation and regulatory compliance (specializing in DUVRI and

site-specific safety protocols).

EDUCATION

Università degli Studi, Milano — *Bachelor's degree*

Information Technology, Thesis on iris segmentation for biometry.

PERSONAL PROJECTS

Mixart APS — *President*

I'm president of Mixart APS, a no profit orgs. See https://mixartaps.org

Mayor Candidate

I was candidate as Mayor in my town.
